Built by radiologists, for radiologists

Dekco Cloud PACS

"You read, we handle the rest"

Cloud PACS, Voice to Text, LLM integrated, more every day, by radiologists for radiologists

Dekco AI Reporter

"No frills reporting"

Voice to text, LLM; small talk makes sense

Dekco is built by a team of radiologists and engineers, spearheaded by Dr. Aditya Daftary a director at Innovision imaging, India's leading musculoskeletal radiology practice.

He has spent many years in tele-radiology both, in USA and India and believes that there is a need for an economical image exchange platform for the developing world that caters to local practice patterns and empowers radiologists, patients and referring physicians while setting the ground work for the next generation of radiology with data analytics and AI.

Dekco Cloud PACS-Core

The foundation of modern radiology operations

Dekco Cloud PACS – Core is a cloud-native PACS platform designed to replace hardware-heavy, on-premise systems with a secure, scalable, browser-based imaging workflow. Built by Radiologist Dr. Aditya Daftary, Dekco Core is grounded in real-world clinical practice and designed for hospitals, diagnostic centres, and teleradiology providers.

Key Capabilities

- Cloud-native PACS architecture (OPEX model)
- Zero-Footprint (ZFP) diagnostic viewer aligned with FDA-cleared frameworks • High-speed image streaming optimised for low bandwidth
- Multi-centre and multi-location access with single login
- Embedded diagnostic viewer within reporting workflow
- Role-based access control, audit logs, governance readiness
- Secure patient and referrer portals
- DICOM, HL7, FHIR and API-based integrations

Outcomes

Faster access to studies
• Reduced IT complexity
• Scalable imaging infrastructure without hardware dependency

Dekco Cloud PACS-Smart

Workflow intelligence layered onto PACS

Dekco Smart builds on the Core platform by adding workflow automation, reporting intelligence, and operational efficiency tools that help radiologists focus on interpretation rather than administration.

Smart Capabilities

Intelligent worklists with priority-based case handling • Automated study matching and prior comparisons • Embedded reporting environment • Structured templates, macros, and hanging protocols • Workflow orchestration for multi-reader and teleradiology setups • Quality assurance, audit trails, and version tracking

Designed For

- High-volume diagnostic centres
- Hospitals with multi-site operations
- Enterprise and tele-radiology deployments

Outcomes

- Improved reporting efficiency
- Reduced turnaround times
- Better operational visibility and control

Dekco AI Reporter

Voice-to-Text + AI-assisted reporting

Dekco AI Reporter is an intelligent reporting solution designed to assist radiologists while preserving full clinical control. It is available as a standalone product or fully integrated with Dekco Cloud PACS.

Key Capabilities

- Medical-grade Voice-to-Text with clinical vocabularies
- LLM-assisted report draft generation by modality
- Structured and semi-structured reporting support
- Intelligent templates and reusable macros
- Export to RIS, EMR, and PACS environments

Designed For

- Reporting fatigue
- Inconsistent report formats
- High-volume reporting pressure

Outcomes

- Faster report turnaround
- Improved consistency and quality
- Sustainable reporting at scale
